

Arnaud Roux, Environmental Scientist

Arnaud plays a key role in natural resources and regulatory assessments as one of the company's environmental scientists. He is responsible for monitoring the company's numerous sites throughout Florida as part of Environmental Resource Permits and Consumptive Use Permits for public and private sector clients. His vast background in the environmental field has established his expertise in soil science, which includes wetland soils identification, exotic plant identification, and identification of hydrologic indicators within wetland areas. Wildlife usage, prescribed burn regimen, listed species presence, and regional alterations to the landscape must be surveyed during Arnaud's course of work. His work associated with residential and commercial land development projects includes the wetland monitoring of Jensen Beach High School and wetland mitigation banking of 2,000 acres in western St. Lucie County. His ability to establish theories explaining the potential causes of changes to the natural areas by compiling historical data is a skill valuable to the environment and to the firm. Arnaud is the current President of the Florida Association of Environmental Professionals, Treasure Coast Chapter.
