

Courtney Britt, Lead AutoCAD Designer & GIS Designer

Courtney possesses expertise with mapping and graphics that has been refined over ten years of experience in land planning. She is responsible for producing all mapping associated with the firm's environmental assessments, permit documents and monitoring network and for providing high quality maps to clients. She has assembled multiple large scale mapping projects for tracks over 50,000 acres, as well as regional mapping associated with Environmental Resource Permits. Her development of historical mapping resources allows the rest of the team to analyze improvements and habitat changes on project parcels. Her production of wetland graphics, historic aerial maps and government land use requires her to work with numerous government agency technicians, wildlife conservation agencies and state transportation staff.
